Paramedical Treatments

Skin exfoliation improves the quality and tone of the skin. Through the process of cell rejuvenation, old surface cells harden and lose moisture. These dead cells dull and dry the skin's surface causing clogging and congestion affecting the skin's ability to breathe and receive moisture. Professional exfoliation removes the dulling, superficial dead skin to reveal newer cells below.

Microdermabrasion

A safe and non-surgical procedure of intense exfoliation and resurfacing that rejuvenates the skin with no downtime. A medical

grade machine with diamond-tipped heads &/or fine alum-oxide crystals are used, to gently abrade the dead surface cells of the skin. Vacuum suction within the machine, assists with the removal of these dead cells, whilst stimulating better lymphatic flow and collagen synthesis. A special treatment mask assists with decongestion of the pores. This is followed by a skin corrective serum infusion and an antioxidant boost that further assists in the decongestion, refinement and healing, of the skin. The whole process stimulates the dermis, promoting the production of collagen, elastin, fibroblasts and fresh skin cells. This instantly results in a radiant, healthier, fresher, firmer and more youthful looking skin with enhanced elasticity and texture.
